

Y12 Summer work

To be completed if you're new to Python

New to Python?

High-level programming languages are all logical and generally follow a similar structure that reflect the English language.

- Download Python from Microsoft store

- When download has been completed, search for 'Idle' in the windows search bar. Do not search for 'Python'
- Go to File, then New File
- This is the Integrated Development Environment where you can write and run your code
- Work through this [online tutorial](#) to get familiar with the Python basics. Tasks 1-10 are most relevant. Some of the tasks are repetitive. If you feel that you are quite familiar with a topic – move on!
